

Our Cause

This year Heavy Hitters Boxing Gym will be hosting our annual event "Boxing for a Cure." We will be proudly donating a portion of the proceeds to the National MS Society Long Island Chapter in a effort to raise money for MS Research.

This year I am personally excited to host "Boxing for a Cure" as a member of the MS Society, and personally fighting this disease myself. As of today there is still no cure. MS is a neurological disease that affects over 2.3 million people worldwide.

MS can be debilitating, and we exist to make sure it doesn't. The National MS Society addresses the challenges of each person affected by MS. Done by funding cutting edge research, driving change through advocacy, facilitating professional education, collaborating with MS organizations around the world, and providing programs and services designed to help people with MS and their families move their lives forward. We are people who want to do something about MS NOW, and are dedicated to achieving a world free of MS. Join the movement at the NationalMSSociety.org.

Early and ongoing treatment with an FDA-approved therapy can make a difference for people fighting multiple sclerosis.

Thank You! Christine Morales

What is Multiple Sclerosis?

Multiple sclerosis (MS) is a potentially debilitating disease in which your body's immune system eats away at the protective sheath (myelin) that covers your nerves. Damage to myelin causes interference in the communication between your brain, spinal cord and other areas of your body. This condition may result in deterioration of the nerves themselves, a process that's not reversible.

Symptoms vary widely, depending on the amount of damage and the nerves that are affected. People with severe cases of multiple sclerosis may lose the ability to walk or speak clearly. Multiple sclerosis can be difficult to diagnose early in the course of the disease because symptoms often come and go — sometimes disappearing for months.

Multiple sclerosis has no cure. However, treatments may help treat MS attacks, manage symptoms and reduce progress of the disease.
